

VNKR series motor adapt the advanced Geroler gear set design with shaft distribution flow, which can automatically compensate in operating with high pressure, provide reliable and smooth operation, high efficiency and long life.

**Characteristic features:**

- Advanced manufacturing devices for the Gerolor gear set, which use low pressure of start-up, provide smooth, reliable operation and high efficiency.
- Shaft seal can bear high pressure of back and the motor can be used in parallel or in series. Special design in the driver-linker and prolong operating life
- Special design for distribution system can meet the requirement of low noise of unit.
- Compact volume and easy installation.
- **HPS**, shaft seal can bear high pressure (150bar) of motor of which can be used in parallel or in series. Advanced construction design, high power and low weight.
- The output shaft runs in **needle bearing** capable of absorbing static and dynamic axial and radial loads.
- Supporting +300 hours of salt spray.

**Main Specification**

Technical data for VNKR with 25 and 1 in and 1 in splined and 28.56 tapered shaft

### Permissible shaft seal pressure

HPS

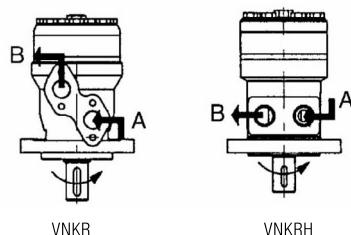

Vincke are made as standard with HPS seal version.

In applications without drain line, output shaft seal exceeds a bit of the pressure in the return line.

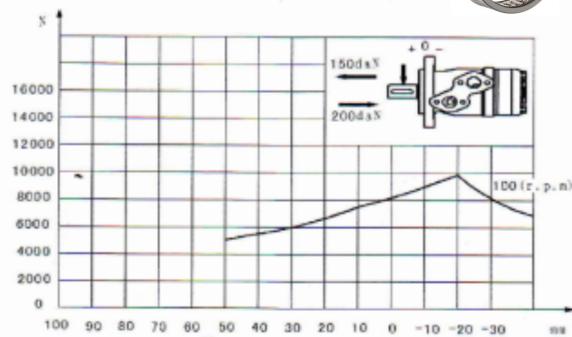

When applications use the drain line, the pressure of output shaft seal equals the pressure in drain line.

### Direction of shaft rotation : Standard

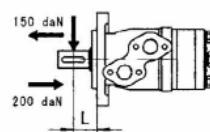

When facing shaft end of motor, shaft to rotate:  
Clockwise when port "A" is pressurized.  
Counter-clockwise port "B" is pressurized.

### Status of the shaft's radial force with needle bearing

$$F_r = \frac{800 \cdot 25000}{n \cdot 95 + L} \text{ daN}$$

$F_r$  = Radial Force .(daN)  
 $L$  = Distance .(mm)  
 $n$  = Speed .(rpm)  
 Rhomb-flange  $L=30\text{mm}$   
 Square-flange  $L=24\text{mm}$

The output Shaft on VNKP-N series is supplied with needle bearing and the recessed mounting allow a higher permissible radial load in comparasion with VNK series motors. The curves apply to a B10 needle roaller bearing life of 2000 hours.

### Relationship between output shaft bearing load and multiplication coefficient

Rotating speed	50	100	200	300	400	500	600	700	800
coefficient	1.23	1	0.81	0.72	0.66	0.62	0.58	0.56	0.54
