Bonded seals are used in pressurised hydraulic systems as a seal between the faces of components.

They consist of a metal washer to which a trapezoidal elastomeric ring is bonded and are designed to work in hydraulic systems where the metal ring ensures that bursting forces applied to the ring are resisted.

These seals come in sizes from $1 / 8^{\prime \prime}$ BSP to $2^{\prime \prime}$ BSP in quantaties from 10 to 100 off.
