SLICE DIRECTIONAL CONTROL VALVES TYPE HDS

BUCHER
hydraulics

The HDS valve range represents a flexible unit construction, the elements of which may be combined into one valve unit as required.

The valves are available connected in parallel and in series circuits.

A typical valve unit comprises an inlet plate, the directional control valve sections and end plate. With all valves in neutral the flow returned to the tank (open centre). In addition high pressure carry over or closed centre circulation are available.

- Lever control
- Electro hydraulic on/off and proportional operation
- Open centre, closed centre and high pressure carryover
- Pilot operated check valves
- Priority flow control valves
- Shock, anticavitation and combined shock and anticavitation valves

ROTARY HYDRAULIC OPERATED LEVER VALVES

All valves are double acting three position rotary control detent notched in the neutral position.

All valves have an integral main relief 30-280BAR/435PSI - 4060PSI.

Max operating pressure - see below.

Ports 3/8" - 1/2" and 3/4" BSP available.

Painted - Primer Expo Inver No1 and finished with black paint castalux CAS - RAL 9005.

These valves are fully marinated and will outlive an agricultural market valve by many years when used in a sea water environment.

The rotary versions give good speed control in conjunction with excellent spool metering.

Ideal for winch applications and built to withstand harsh on-deck conditions.

MONOBLOCK CONTROL VALVE C/W FLOW CONTROL

Ideal for control of hydraulic motors and hydraulic cylinders.

The valve is double acting c/w 3 position detent kit.

Valves have an integral main relief 30-280BAR/435PSI - 4060PSI.

Max operating pressure 300 BAR

Ports P, A, B and T 1/2" BSP

Max input flow 50L/Min

The pressure compensated flow control will control the speed of a hydraulic motor or hydraulic cylinder.
All residual flow will return down the tank line.

HYDRAULIC HOSE-REEL VALVE LEVER OPERATED C/W FLOW CONTROL

GENERAL

This compact valve has been specifically designed to operate hose and cable reels.

The valve is fitted with an adjustable priority flow control on the inlet section, this is pressure compensated, the excess flow returns to tank.

The main relief is adjustable from 96 - 210 bar, other spring settings available upon request.

The lever operating spool slice has 4 positions.

The desired speed is selected using the speed control knob then the direction of the flow is selected using the spring centre lever, you can select forward, neutral or reverse. The lever can also be detented into a fourth position - commonly known as 'floating fourth', the fourth position allows the reel to 'free wheel' enabling the hose to be pulled off by hand. In the neutral position the reel is locked hydraulically.

Features

- Very compact
- Light weight
- Variable speed
- Pressure compensated maintaining constant speed irrespective of load or flow
- Adjustable relief valve
- Quality floating fourth kit.

HYDRAULIC HOSE-REEL VALVE WITHOUT FLOW CONTROL

These compact valves have been specifically designed to operate hose and cable reels. Each valve comes complete with a main relief valve fully adjustable from 96 - 210 bar, other spring settings available upon request.

The lever operating spool slice has 4 positions.

The direction of flow is selected using the spring centred lever valve, select forward, neutral or reverse. The lever can also be detented into a fourth position - commonly known as a "floating fourth", the fourth position allows the reel to "free wheel" enabling the hose to be pulled off by hand. In the neutral position the reel is locked hydraulically and the pump will unload the flow to tank.

MONOBLOCK DIRECTIONAL CONTROL VALVES

- High technical performances granting larger application range.
- Special high resistance cast-iron body, suitable for high working pressures.
- Nickel-plated offering granting long working life under high pressure conditions (see attached scheme).
- Standard circuit in parallel grants simultaneous operations, and due to negative overlaps and dedicate metering, there is proportional movement at the working ports.
- Minimal internal leakages.
- Interchangeability of the spools also with the ones of the sectional valves with "parallel" or "single" scheme
- Possibility to reverse the control side, turning the spool of 180° permits unication, versatility and low value of some parts in stock.
- Free movement version "Y shape" allows high oil flow with low pressure drops, in relation with the small dimensions of the control valves.
- Above features not valid for Q35 having positive overlap. The Q35 spools are interchangeable.

NOTES FOR DIRECTIONAL CONTROL VALVES ASSEMBLY

- The three feet of the valve must always and perfectly rest on a 180° degree at surface.
- No conical nipples with 1/8" C thread must be used.
- Before painting the control valve, do not use diluents or any products that could damage rubber parts.

USE AND OPERATION

Pilot check valves are used to block the actuator in both direction. Flow is free in one direction and blocked in the reverse direction until pilot pressure is applied. These valves are very safe, that's why they are ideal to be assembled on crane hydraulic cylinders. The shut-off system enables to exclude and risk caused by possible manoeuvring errors.

USE AND OPERATION

These valves are used to block the cylinder in one direction. The flow is free in one direction and blocked in the reverse one until pilot pressure is applied. Separated mounting enables valves to be insensitive to back pressure on the line V. Assembly on 2 or more parallel cylinders with flow regulator valve to allow balanced and soft descent is highly recommended

Body: Aluminium, **Internal parts:** Hardened and ground steel, **Seals:** Buna N standard, **Poppet type:** No leakage

Applications: Connect v1 and v2 to the pressure flow and c1 and c2 to the actuator as indicated in the diagram

OVERCENTRE VALVES

USE AND OPERATION

These valves are used to control actuator's movement and block in one direction in order to enable the following functions: Under control descent of a load: load's weight doesn't carry it way as the valve prevent any cavitations of the actuator. Limited maximum pressure in case of shocks created by loads, over loads or sudden manoeuvring (load control with open centre distributor)

Body: Zinc-plated steel **Internal parts:** Hardened and ground steel, **Seals:** Buna N standard, **Tightness:** minor leakage

Standard settings: 320 bar

Valve setting must be at least 1,3 times more than load pressure in order to enable the valve to close even when undergone to the maximum load pressure

Applications: Connect v1 and v2 to the pressure flow, c1 to the free flow side of the actuator and c2 to the actuator's side you want the low to be blocked. In-line mounting

USE AND OPERATION:

These valves are used to control actuator's movements and block in one direction in order to have an under control descent of a load; load's weight doesn't carry it away, as the valve prevents any cavitations of the actuator. These valves are ideal when normal overcentre valves doesn't work properly as it's not sensitive to back pressure. They allow to work in series with more movements also. Flange ports enable direct mounting of the valve to the actuator.

Body: zinc-plated steel **Internal parts:** hardened and ground steel **Seals:** BUNA N standard **Tightness:** minor leakage **Standard setting:** 320 Bar Valve setting must be at least 1,3 times more than load pressure in order to enable the valve to close even when undergone to maximum load pressure.

Applications: Connect V1 and V2 to the pressure flow, C1 to the free flow side of the actuator and flange C2 to the actuator's side you want the flow to be blocked. V1 and V2 ports are reversible.

USE AND OPERATION

This valve is used to block pressure to a certain setting in the 2 ports of an hydraulic motor: when it reaches pressure setting, the valve opens allowing pressure relief in T. The relief valve provides overload protection in a fast and accurate way and Cavitation is avoided thanks to the check valve.

Body: Zinc-plated steel (VAUAC 1/2") and Aluminium VAUAC 3/4" **Internal parts:** Hardened and ground steel, **Seals:** Buna N standard, **Poppet type:** minor leakage

Applications: Flange M1 and M2 directly to the motor and connect P1 and P2 to pressure flow. Connect T to the tank. Mounting by the actuator is highly recommended in order to avoid pressure drops and get prompt duty.

USE AND OPERATION

This valve is used to adjust flow speed of actuators in one direction; flow is free in reverse one. As pressure compensation is not provided, flow adjustment depends on pressure and oil viscosity.

Body: Zinc-plated steel **Internal parts:** Hardened and ground steel, **Seals:** Buna N standard, **Tightness:** By diameter combination. Minor leakage with closed valve.

Applications: Connect V to the pressure flow and C to the actuator to set. The flow is adjusted from C to V and free in the reverse direction. When used on actuator with double pilot check valve, VRF has to be mounted between the actuator and the double pilot check valve. Flow adjustment is made by rotating the coupling: by clockwise rotation flow increases and vice versa. Once the flow has been set, lock the nut in order to keep the desired settings, even case of vibrations.

USE AND OPERATION

Sequence valve is used to feed 2 cylinders in sequence: it provides flow to the secondary circuit when a primary circuit function has been completed reaching the pressure setting. Return flow is free. It's ideal for circuit with low pressure on the secondary actuator as the pressure adds to it.

Body: Zinc-plated steel **Internal parts:** Hardened and ground steel, **Seals:** Buna N standard, **Tightness:** Minor leakage.

Applications: For use with 2 actuators, follow the mounting instructions indicated in the scheme. For different uses, mount the valve keeping consideration that, when the valve reaches the setting pressure, the flow goes from V towards C, whilst flow is free from C to V.

Applications: For use with 2 actuators, follow the mounting instructions indicated in the scheme. For different uses, mount the valve keeping consideration that, when the valve reaches the setting pressure, the flow goes from V towards C, whilst flow is free from C to V.

REGENERATIVE VALVE

www.flowfitonline.com
TECH. DATA SHEET
CV88

USE AND OPERATION:

This valve allows to recover the oil from the rod to port C1 and to send it to the bottom valve through the port P, adding it to the pump flow rate. When the pressure in the bottom valve of the cylinder achieves the setting value, oil from the rod is sent to the tank through port V1, restoring a non-regenerative system with maximum thrust. The exclusion pressure of the regenerative depends only on the pressure in the bottom valve of the cylinder.

Body: zinc-plated steel. **Internal parts:** hardened and ground steel. **Seals:** BUNA N standard. **Tightness:** minor leakage

Applications: Connect C1 to the cylinder stem, V1 to the pressure flow, P to the cylinder bottom valve and to the pressure flow at the same time, M to the manometer if there is.

Body: Zinc-plated steel **Internal parts:** Hardened and ground steel, **Seals:** Buna N standard, **Tightness:** Minor leakage.

Applications: Connect P and P' to the 2 pressure flows, ports A and B to the first actuator and ports A' and B' to the second actuator. With lever in position 1, P is connected to A and P' to A'; with lever in position 2, P is connected to B and P' to B'. Use with lever in central position is NOT recommended.

USE AND OPERATION

This valve is used to stop oil inlet in a hydraulic circuit or to stop actuator's stroke (normally opened valve). The valve closing, obtained by pulling or pushing the slider, allows an immediate and total stop of the oil flow.

Body: Cast iron **Internal parts:** Hardened and ground steel, **Seals:** Buna N standard and POM seals, **Tightness:** Minor leakage.

Applications: Connect P to the distributor and A to the circuit or to the actuator. When the slider is operating, flow is blocked from P towards A, whilst the check valve enables free flow oil flow in the reverse direction (from A towards P).

PLOUGH OVERTURNING VALVES

SINGLE ACTING PLOUGH OVERTURNING VALVES

USE AND OPERATION

This valve has been realised for use on cylinders for reversible plough to obtain the automatic backflow and therefore the reversal of the motion of the hydraulic cylinder that makes the plough rotate. It is provided with a single pilot check valve which guarantees safety just on the block side, whilst the stem side it must be leaned on the plough mechanical locks. Assembly on balanced and light plough with internal diameters 40/50mm and 60/80mm is recommended.

Body: Zinc-plated steel **Internal parts:** Hardened and ground steel, **Seals:** Buna N standard, **Tightness:** No leakage. These valves are supplied with exchange pressure at 140 Bar: according to your requirements, pressure setting can be modified by acting on the pressure regulator.

Applications: Connect C1 to the cylinder's stem, C2 to the block, P and T to the machine inlet. Due to its shape, it can be in-line assembled on a hydraulic cylinder or directly fixed on the plough by means of the threaded hole on the body.

FLOWFIT CETOP 5 NG10 MODULAR FLOW CONTROL VALVE WITH CHECK

www.flowfitonline.com
TECH. DATA SHEET
FCV26

The Flowfit modular flow control valves regulate the flow of oil through the circuit in one direction whilst allowing free flow in the opposite direction using a check valve.

Two types of valve are available; the first meters the flow of oil into the circuit (allowing free flow out), while the second meters the flow out of the circuit (allowing free flow in).

Flow on the metered side can be adjusted using the plastic knob (standard on all modular flow control valves) but for added security, valves can also be supplied with an adjustment screw that can be locked once the desired flow has been set (Available upon request).

Flowfit offer a large range of solenoid pilot operated directional control valves.

The spool is controlled to shift flow direction of system by piloted pressure sent from a NG6/Cetop 3 solenoid directional control valve mounted on top of the main valve. This NG6/Cetop 3 valve is a double acting spool type 3C4.

This Cetop 3 valve solenoid controls the pilot flow on the main deck valve which will then control higher pressures and larger flows.

FLOWFIT CETOP 10 NG32 SOLENOID PILOT OPERATED DIRECTIONAL CONTROL VALVES

www.flowfitonline.com
TECH. DATA SHEET
FCV53

Flowfit offer a large range of solenoid pilot operated directional control valves.

The spool is controlled to shift flow direction of system by piloted pressure sent from a NG6/Cetop 3 solenoid directional control valve mounted on top of the main valve. This NG6/Cetop 3 valve is a double acting spool type 3C4.

This Cetop 3 valve solenoid controls the pilot flow on the main deck valve which will then control higher pressures and larger flows.

HYDRAULIC MOTOR SERIES FFPMM

www.flowfitonline.com
TECH. DATA SHEET
FHM01

The FFPMM hydraulic series motor provides high output torque from a very small package. All FFPMM hydraulic motors have built in check valves ensuring pressure on the shaft seal does not exceed the return line pressure. FFPMM hydraulic motors can replace Sauer Danfoss OMM motors.

The anti-rust coating colour is phosphatizing coat. Phosphate coating is used for increased corrosion protection, and improved friction properties. This is applied to threaded parts and top coated with oil to add anti-galling and rust inhibiting characteristics. Its Colour is, dark grey / black.

- Spool valve type with gerotor
- With or without flange
- Optimized for small spaces
- Internal check valve
- Side and rear ports
- Usage without drain line possible

HYDRAULIC MOTOR SERIES FFPRM

www.flowfitonline.com
TECH. DATA SHEET
FHM03

The FFPRM series hydraulic motor provides high performance with high efficiency due to low rolling friction drive elements. Industry standard housings and shafts enables the FFPRM hydraulic motor to interchange with most makes of motor. Flowfit fully interchanges with the Sauer Danfoss OMR range. High pressure shaft seal offers superior seal life and performance.

The anti-rust coating colour is phosphatizing coat. Phosphate coating is used for increased corrosion protection, and improved friction properties. This is applied to threaded parts and top coated with oil to add anti-galling and rust inhibiting characteristics. Its Colour is, dark grey / black.

- Spool valve type with geroler
- Low starting torque and high efficiency
- Optimized for small spaces
- Internal check valve
- Usage without drain line possible
- High pressure seal is standard

HYDRAULIC MOTOR SERIES

Calculation of hydraulic motors

Calculation of wheel drives:

1. Motor speed n of wheel drive:

$$n = \frac{2,65 \cdot v_{km} \cdot i}{R_m}$$

v_{km} = Vehicle speed [km/h]

R_m = Wheel rolling radius [m]

i = Gear ratio between motor and wheels, if there's no gearbox use $i=1$

2. Rolling resistance R , [daN]

The resistance force resulted in wheels contact with different surfaces:

$$R = G \cdot \varphi$$

G = Total weight of vehicle [daN]

φ = Rolling resistance coefficient (s. below)

Rolling resistance coefficient in case of rubber tire rolling on different surfaces	
Surface	φ
Concrete - faultless -	0.010
Concrete - good -	0.015
Concrete - bad -	0.020
Asphalt - faultless -	0.012
Asphalt - good -	0.017
Asphalt - bad -	0.022
Macadam - faultless -	0.015
Macadam - gut -	0.022
Macadam - bad -	0.037
Snow - 5cm -	0.025
Snow 10 cm -	0.037
Mud	0.037 - 0.150
Sand-gravel	0.060 - 0.150
Sand, loose	0.160 - 0.300

3. Grade resistance G_R , daN

$$G_R = G \cdot (\sin \alpha + \rho \cdot \cos \alpha)$$

α = gradient negotiation angle (see below table)

Grade [%]	α degrees	Grade [%]	α degrees
1	0°35'	12	6°5'
2	1°9'	15	8°31'
5	2°51'	20	11°19'
6	3°26'	25	14°3'
8	4°35'	32	18°
10	5°43'	60	31°

4. Accelerate force FA [daN]

Force FA necessary for acceleration from 0 to maximum speed v and time t can be calculated with:

$$FA = \frac{v_{km} \cdot G}{3,6 \cdot t} [daN]$$

FA = Acceleration force [daN]

t = Time [s]

Additional there are tractive efforts possible, e.g. if you use an additional trailer.

5. Total tractive effort F_{ges} [daN]

The necessary total tractive effort F_{ges} of the vehicle is calculated with the sum of single forces (point 2. - 4.). It is also necessary to consider 10% for safety reasons (e.g. for air resistance).

$$F_{ges} = 1,1 \cdot (R + G_R + FA)$$

R = Rolling resistance [daN]

G_R = Grade resistance [daN]

FA = Acceleration force [daN]

6. Motordrehmoment M_M

Necessary torque for every hydraulic motor can be calculated with:

$$M_M = \frac{F_{Ges} \cdot R_m}{N \cdot i \cdot \eta_M}$$

N = Number of motors

η_M = Mechanical gear efficiency (if it is available)

7. Connection of hydraulic motors

We are always advise to connect the drain port because the cooling and the lifetime of the motors is much better.

WHITES DT SERIES HYDRAULIC MOTOR

The most amazing aspect of the DT Series motor is its huge torque potential from its relatively small size. The DT Series motor is capable of producing output torque comparable to competitive designs, but from a package that is both shorter and lighter. The savings in space and weight in no way compromises durability, as the motor uses massive shafts, bearings and drive links to transmit the torque produced by this powerful package. The use of a case drain allows reduced pressure on the shaft seal while maintaining drive-line lubrication for maximum motor life. Standard mounting and shaft options offer interchange ability with competitive designs. An internal drain option is also available.

Features / Benefits

- Heavy-Duty Roller Bearing supports high side loads and received forced lubrication for cooling and increased life.
- Compact Housing contributes to high power-to-weight ratio of motor and offers front and rear mounting flanges.
- Heavy-Duty Drive Link received forced lubrication for long life and is capable of extreme duty cycles.
- Roller Stator Motor available in displacements up to 2093cm³ for high torque output.
- Three-Zone Orbiting Valve precisely meters oil to produce exceptional volumetric efficiencies

Typical Applications

Heavy-Duty wheel drives, augers, mixers., pumping units, conveyors, boring machines, rotators, mining equipment, forestry equipment and more and more.

WHITES RE SERIES HYDRAULIC MOTOR

RE Series motors offer the perfect compromise between price and performance by producing work horse power at a reasonable cost. Although these motors perform well in a wide range of applications, they are especially suited for low flow, high pressure applications. During startup pressure causes the balance plate to flex toward the rotor, vastly improving volumetric efficiency. As the motor reaches operating pressure, the balance plate relaxes, allowing the rotor to turn freely which translates into higher mechanical efficiencies. Transmitting this power to the output shaft is the most durable drive link in its class. Four bearing options, combined with standard mounting flanges and output shafts, allow the motor to be configured to suit nearly any application.

Features / Benefits

- High pressure shaft seal offers superior seal life and performance and eliminates need for case drain.
- Three bearing options allow load carrying capability of motor to be matched to application
- Heavy-duty drive link is the most durable in its class and received full flow lubrication to provide long life.
- Value-in-rotor design provides cost effective, efficient distribution of oil and reduces overall motor length.
- Pressure-compensated balance plate improves volumetric efficiency at low flow and high pressure.

Typical applications

Medium-duty wheel drives, augers, mixers, win drives, swing drives, grapple heads, feed rollers, broom drives and more.

WHITES WS SERIES HYDRAULIC MOTOR

The WS targets agricultural equipment, skid steer attachments, and other applications that require greater torque under demanding conditions. A distinguishing feature of the WS in relation to competitive products is its heavy duty drive link with a larger pitch diameter. This enables the WS to better withstand pressure and torque spikes and it reflected in its intermitted and peak performance ratings. Additional product features include a three zone commutator valve, heavy-duty tapered roller bearings, and case drain with integral internal drain. The WS offers numerous housing, displacement and shaft options to meet most common SAE and European requirements.

Features / Benefits

- Nine shaft and seven mounting options to meet the most common SAE and European requirements
- Heavy-duty tapered roller bearings for extra side load capacity
- Heavy-duty drive link with larger pitch diameter than competitors for greater resistance to pressure and torque spikes
- Three zone commutator valve for high flow capacity
- Standard case drain with integral internal drain for extended shaft seal

Typical Applications

Medium-duty wheel drives, sweepers, grain augers, spreaders, feed rollers, brush drives, mowers, harvesting equipment gear box mounts and more.

ELB BRAKES

www.flowfitonline.com
TECH. DATA SHEET
MSM07

Hydraulic Disc Brakes are designed for use with heavy duty machinery and off-highway vehicles in the construction, material handling, agriculture, mining, sanitation and timber industries. They are also used in a multitude of winching applications and in hydrostatic engine drive systems.

The Hydraulic Disk Brake is sprung loaded to apply the brake, and hydraulic pressure is required to release the brake. Normal operation is to have the brake pressurized in the released position with the vehicle hydraulic system running. Any function which reduced the hydraulic system pressure below the release pressure of the brake will allow the springs to apply the brake.

This brake is designed to be a parking brake only. Dynamic braking is not recommended.

HKU & HKUS STEERING UNITS

www.flowfitonline.com
TECH. DATA SHEET
MSM08

The M+S Hydraulic Hydrostatic Steering units are used in low-speed vehicles which driving speed does not exceed 60 km/h - such as : building machines, fork-lift trucks, harvesting machines, off-highway equipment and others. These hydraulic units amplify the torque to the steering wheels, with no need of hard mechanical connection.

The XY hydrostatic steering unit incorporates an axially displaced tracing valve and a metering pump in one housing. The working liquid is supplied by a separate pump and then is directed by the metering pump to the steering cylinders.

The XY steering unit is manufactured with a built-in check valves, and there is an option for a built-in relief valve in the inlet.

USE AND OPERATION

This valve enables to keep "P" flow constant to a certain setting, independently of the required pressure or the inlet flow of the valve. Exceeded flow is drained directly in T (tank).

Body: zinc-plated steel, Internal parts: Hardened and ground steel, Seals: Buna N standard, Tightness: By diameter combination. Minor leakage (few drops per minute), Applications: Connect M1 and M2 to the motor and P and T to the pressure.

DUAL CROSS RELIEF VALVE FLANGEABLE ON DANFOSS MOTORS OMS-OMP/OMR-OMT

www.flowfitonline.com
TECH. DATA SHEET
BOHV7

USE AND OPERATION

Made up by 2 relief valves with crossed tank, this valve is used to block pressure to a certain setting in the 2 ports of an actuator/hydraulic motor. It's ideal to provide protection against sudden shock pressures and to adjust different pressures in the 2 ports of an hydraulic circuit as well. Direct flange is ideal for Danfoss motors type OMS, OMP/OMR and OMT and provides a maximum safety, very low pressure drops and solid installation.

Body: Zinc-plated steel Internal parts: Hardened and ground steel, Seals: Buna N standard, Poppet type: minor leakage

Applications: Flange M1 and M2 directly to the motor and connect V1 and V2 to pressure flow.

ON REQUEST: Different setting range available (See table below) Other settings available (CODE/T: please specify the desired setting). Single acting with just 1 relief available (CODE/ SE). Brake unclamping (CODE/ SF)

Tandem pump kits are a great way of assembling multiple standard pumps together.

All the standard gear pumps are already designed to engage another pump on the rear.

All standard pumps require 1 kit for a tandem pump assembly, 2 kits for a triple pump assembly and 3 kits for a quadruple pump assembly.

FLOW DIVIDERS

www.flowfitonline.com
TECH. DATA SHEET
FD01

Galtech introduces new line of flow dividers DF, in response to market demands that every day challenges us to broaden the range of products.

The DF range is available with aluminum body and flange, displacements from 0.9 to 26 cm³ and on-demand with relief valves for the equalization of hydraulic cylinders

External flow gear dividers are non-dissipative hydraulic components consisting of multiple interconnected sections, which divide the inflow into equal or mutually proportional parts, allowing for synchronised movement of multiple actuators independently of the load. Flow dividers can also be used as pressure intensifiers to increase the working pressure of a plant.

HYDRAULIC GEAR PUMP MODEL GP-CBN TECHNICAL DATA

www.flowfitonline.com
TECH. DATA SHEET
TSHL01

These 2 stage pumps can give you much faster cycle times and higher possible pressures with a small engine. Excellent for use on log splitters. 85% efficient.

Model GP-CBN is a HI/LO Hydraulic Gear Pump with 12 displacement combinations with maximum pressures of 950 psi for the low pressure pump and 3000 psi for the high pressure pump.

The change from LO to HI pressure is automatic with the LO side pressure pre set from 400 psi to 900 psi. The HI/LO section of the pump is all aluminum and the endplates are cast steel.

Applications for the HI/LO pump are log splitters, presses etc. where rapid movement of the cylinder at low pressure is required prior to automatically switching to the high pressure mode to meet load requirements.

Recommended working conditions:

1. FILTRATION 25 micron or better
2. OIL VISCOSITY 6 to 200 cSt
3. INLET PRESSURE 12 to 32 psi abs.
4. OIL TEMPERATURE -25 to 80 degrees C (-12 to 175 degrees F).
5. AMBIENT -22 to 55 degrees C (-8 to 130 degrees F).

Two Stage Hi-Low Gear Pump Features:

This 2 stage Hi-Low gear pump can give you much faster cycle times and higher maximum pressures with a small engine. Excellent for use on log splitters and hydraulic press applications and run at 85% efficiency.

Model GP-CBN is a HI/LO hydraulic gear pump with 12 different displacement combinations with maximum pressures of 900 psi for the low pressure pump and 3000 psi for the high pressure. The change from LO to HI pressure is automatic with the LO side pressure pre set from 400 psi to 900 psi.

The HI/LO section of the pump is all aluminium and the end plates are cast steel. Applications for the HI/LO pump are hydraulic log splitters and hydraulic presses etc where rapid movement of the cylinder at low pressure is required prior to automatically switching to the high pressure mode to meet load requirements.

HYDRAULIC ELECTRIC MOTOR PUMP SET 3.7KW 240V SINGLE PHASE (1PH) WITH 8GPM HI-LO PUMP

www.flowfitonline.com
TECH. DATA SHEET
EMPS1

This two stage motor pump set can offer a faster cycle time than a conventional gear motor setup. The Hi-Lo Pump is preset at 900 psi for the low pressure pump and 3000 psi for the high pressure. The change from Lo to Hi pressure is automatic with the Lo side pressure pre set from 400 psi to 900 psi.

Applications for the Hi-Lo pump are log splitters and presses where rapid movement of cylinder at low pressure is required prior to automatically switching to high pressure mode to meet load requirements.

The Hi-Lo pump set consists of:

- Single Phase 240V 3.7KW 2 Pole Motor.
- Flowfit 8 GPM Hi-Lo gear pump, giving 24 L/min @ 900PSI at 2850 RPM and 6 L/min @ 300 PSI at 2850 RPM
- Flowfit bell housing and drive coupling.
- 22 Amp Load current – To be wired direct on line from a starter. (Does not include wiring).
- Industrial wiring to be used.
- If you are in doubt on the wiring then please consult a fully qualified electrician.

These units are perfect for installations where it is not suitable for engine driven log splitter or presses.

Working pressure: 180 bars.
 Speed: 0.5 m/s.
 Working temperature: -25°C - +80°C.
 Oil: Mineral oil.
 Rod: C45 f7 25 microns.
 Tube: St52.3 Din2393 Iso H9

Volume = $\pi r^2 \times h$ (height)
 Example = Cylinder 40-70/80-400 (mm)
 $3.5^2 \times 3.14 \times 0.04$ (m.)
 Total 1.5386 litres

Push Force = $\pi r^2 \times \text{pressure (bar)}$
 Example = Cylinder 40-70/80
 $3.5^2 \times 3.14 \times 150$ (bar)
 Total 5.769.75 Kgs

Push Force = $\pi r^2 \times \text{pressure (bar)}$
 Example = Cylinder 40-70/80
 Calculate Rod Area: $3.14 \times 2.0^2 = 12,56$
 Calculate Tube Area: $3.14 \times 3.5^2 = 38,465$
 Subtract Areas: $38,465 - 12,56 = 25,905$
 Strength: $25,905 \times 150$ (bar) = 3885.79

FLOWFIT LOG SPLITTER KITS

Flowfit offer a range of Log-Splitting Components to suit a variety of size requirements and performances. The components can be sized to suit portable Petrol Motor units and Tractor PTO set-ups. The petrol units have four basic sizes – 5.5 HP, 9 HP, 13 HP and 20 HP and can be suited for use with Loncin and Honda and many other petrol engines. The Flowfit Log Splitter Kit comes complete with a top quality Flowfit High-Low Pump that is designed to use the available horsepower in the most efficient manner with a fast approach at low pressure, and a slower splitting action at high pressure. Besides the standard double acting log splitter valve supplied with each log splitter kit we also offer as an optional extra a 3/8 lever operated log splitter valve with autokick out function this is the most popular log splitter valve on the market and comes with a number of significant features, first pull the lever into the detent position (at this point no need to hold hand on the lever) the double acting hydraulic cylinder fully extends, the lever then automatically kicks out to neutral. You then push the lever into another detent position to return the double acting cylinder which does not kick out automatically. This action can be reversed to give the opposite action depending how you wish to operate your log splitter.

Flowfit have also included the following components for the three sizes of log-splitting system and is offering them as complete hydraulic component kit for new or rebuilt log-splitters.

REVERSIBLE HYDRAULIC MECHANICAL CLUTCH AND PUMP ASSEMBLIES

These assembly kits are reversible, we do offer bi-directional upon request. When coupled with our range of gear pumps we recommend to engage and disengage the pump when the directional valve is in the unload position at a speed of no more than 1800 rpm. In the reversible position the max engagement and disengagement speed is 1000 rpm.

LUBRICATION

SEA 90 gear oil must be put in the mechanical clutch prior to use - please note we do not supply the gear oil and will not accept responsibility for customers not putting oil into the clutch unit. Change the oil after the first 60-80 hours and then every 12 months or 1500 hours which ever falls first.

MAINTENANCE

Please check the oil level via the special oil window every 50 hours. Working temperatures should not exceed 120 degrees celcius under continuous duty cycle.

SPECIFY THE CORRECT MECHANICAL CLUTCH

Please check if you are unsure how to apply and use this product. Speed, flow and pressure have a big bearing on selecting the correct combination. If unsure please ask our technical department for assistance.

Please check with the Technical Sales Office if you are not sure which mechanical clutch to use.

ELECTRO MAGNETIC CLUTCH AND PUMP ASSEMBLIES

The most powerful range in the uk up to 60 danm off the shelf.

Brand new electromagnetic clutch and pump assemblies are commonly used in marine, agricultural, offroad and general industrial applications such as remote hydraulics in service trucks, boats, trucks with automatic transmissions, farm tractors and snow ploughs.

During assembly please make sure there is no oil or grease traces on the pulley surfaces which must be completely dry and clean.

Running in of the full range of electromagnetic clutches is required to obtain the desired rated torque value. Running in is carried out by engaging and disengaging clutch at high speed several times with the pump in the unload position.

When assembling the electromagnetic clutches with any front driving flange please check for correct coupling alignment, but do not exceed rated torque because this would cause slippage of the contact surface where the belts are located. This stage must not last more than 5 seconds as coils within the clutch will burn out.

Mounted inline with engine belt 2 groove pulley

Clockwise rotation - Max 5000rpm

Available electrical inputs available are 12 volts 4.55A and 24v 2.54A

Operating temperature 80 degrees celsius, -20 degrees celsius

Nominal torque, flow rates and voltages shown in part number description.

For lower/higher flow rates and lower /higher speeds please contact us for technical clearance as this will make a difference to the torque suitability of the clutch.

Preheating of hydraulic oil on mineral basis for a fast reaching of the operating temperature at hydraulic units.
The optimum viscosity decreases the wear of the hydraulic components.

VR

Immersion heaters with magnetic clamp, no mounting effort, ideal solution to retrofit existing installations. Protection IP 68. Integrated thermostat with switch-off temperature 40°C (standard).

RHK

Tube screwed-in heater, protection IP 54. Screwed thread G 1 1/2".

PTHK 90

Cartridge screwed-in tank heater with tube insert. Protection IP 65. This type of heating insert can be changed without evacuation of the oil tank. Screwed thread G 1 1/2" and G 2".

RHK-TH

Tube screwed-in heater with temperature adjustment, external or internal regulation. Standard adjustable 0°C up to 85°C. Protection IP 54. Screwed thread G 1 1/2".

PTHK 91 TH

Cartridge screwed-in tank heater with temperature adjustment, external or internal regulation. Standard adjustable 0°C up to 85°C. Protection IP 54. This type of heating insert can be changed without evacuation of the oil tank. Screwed thread G 2".

VR IMMERSION HEATERS WITH MAGNETIC CLAMPS

www.flowfitonline.com
TECH. DATA SHEET
TH02

- For preheating of hydraulic oil
- No mounting effort, ideal solution to retrofit existing installations
- Horizontal or vertical arrangement, low minimum oil level
- Medium touched pieces stainless steel (14571), brass and plastics respectively
- Welded type
- Magnetic clamps for fixing at tank bottom/partition wall
- Protection 1P68
- Integrated thermostat with switch-off temperature 40°C (standard)
- Integrated temperature limiter
- Surface charge: 1.2 W/cm² for HIP
0.6 W/cm² for HFA/HFC/HFD-11

MOUNTING

Insert the heater either horizontally to the bottom or vertically towards the tank wall. Fixation by magnetic clamp. The cable must be led outside above the oil level, e.g. through the cover and fixed of the tank or the cover by a screwed cable gland M16. During operation the tank heater must be covered by at least 15 mm of the medium, otherwise the medium and/or the heater might be damaged or destroyed. In case of retrofitting, the opening of the tank cover which the heater is led through, must amount to 70 mm at least. On no account it should be hung up on the connection cable. Additionally a 'gathering' of iron particles in the tank will be achieved by the integrated magnetic clamps.

CONSTRUCTION/MATERIALS

- Heating elements protected by tubes made of stainless steel (14571)
- Cable connection made of brass
- Three-pole plastic cable, length 4m, with screwed cable gland M16 resistant to mineral oil, vegetable oil and lubricants as well as HFA and HFC liquids

CLOGGING INDICATORS

TECHNICAL INFORMATION

Clogging indicators controlling and determining the moment when filter change should take place are available for the entire FILTREC assembly range.

ABSOLUTE pressure indicators

They measure the pressure in the filter vs the atmospheric one. Usually they are used on return line filters discharging in tank.

Clogging indicators

- **Visual:** The indicator is provided with a bar and a psi scale. The pointer indicates clog value.
- **Electrical:** Electrical signal indicates clog value. It is used in hard to reach areas, the signal is visible on a control panel through a led.

DIFFERENTIAL pressure indicators

Differential pressure indicators measure the difference in pressure between the dirty and the clean side of the filter. They are not affected by atmospheric pressure. Usually they are used on pressure and return line filters.

Clogging indicators:

- **Visual:** A colored indicator reports when pressure setting is reached:
GREEN = differential pressure minor than setting value
RED = differential pressure major than setting value
- **Electrical:** An electrical signal indicates when admissible differential pressure is reached. It is used in hard to reach areas, the signal is visible on a control panel through a luminous led.
- **Visual Electrical:** Both colored indicator and electrical signal indicate when pressure setting is reached.

TSF NEW VENT PLUG TO REDUCE OIL OIL DAMP ESCAPE

www.flowfitonline.com
TECH. DATA SHEET
FA06

- Filler Breather with easy grip vertical ribs, manufactured from Thermoplastic material (Polymide 66). Maximum working temperature 100°C.
- These style Filler Breathers are produced in black with a red lid, with the text "OIL". On large orders a custom text or company logo is possible.
- A standard flat rubber seal is used, but a 'O' ring seal is available, both in NBR 70 shore.
- Located under the lid is a Polyurethane foam filter (50 Micron) installed, which is easy to be cleaned once the lid is removed.
- The series TSF has a specially designed cavity which prevents oil from escaping through the Breather holes when it is splashed in an upward direction, often occurring when there is a strong oil movement due to rotating gears.
- The inside of the TSF features a conical cavity which, due to its design entraps oil but allows air to escape and enter (within limitations).
- These Filler Breather plugs are utilised on hydraulic power packs, oil tanks, gear reduction boxes, gearboxes or any application where strong movement causes splashing oil in or around the Filler Breather.

Manual nozzles have been designed to satisfy the need of safety, ease of handling and efficiency. The nozzles are manufactured with a resistant aluminium body enclosed in an anti-shock plastic shell which increases the nozzles ease of handling by making the grip comfortable even when working at low temperatures. The integrated swivel connector, and the hammer free valve inside it, guarantees a high degree of safety. The low loss of head, given the conformation of the valve, allows it to function at upto 150 L/min.

Please refer to the specification table below to ensure the correct size is selected.

Red plastic plugs and caps for female/male couplings up to 1" BSP and aluminium plugs and caps for female/male couplings from 1 1/4" - 2" BSP available to protect and stop dirt entering the quick releases and your hydraulic circuit.

INSTRUCTIONS FOR USE

Prior to connecting ensure that the mating parts of the couplings are clean and free of dirt to avoid contamination of the hydraulic system.

To connect, pull the collar on the female coupling back and insert the male coupling as far as it will go. Release the collar to lock the couplings together.

To disconnect, pull the collar on the female coupling back and allow the male coupling to disengage.

CAUTION

Under no circumstances should the couplings be connected or disconnected with pressure in the hydraulic system.

Whilst in use, the couplings may become hot (up to +100°C). Protective gloves should be worn when disconnecting.

To reduce the risk of contamination, the use of protective plugs and caps on the couplings when they are disconnected is strongly recommended (available separately).

WARNING

These couplings are unsuitable for use on Pulse/Hammer applications.

Flowfit hydraulic flat face quick release couplings of this series represent the first genuine revolution in the field of applications for flat face quick release couplings. Where previous models performed well at low operating pressures and with limited fluctuations in pressure, these new couplings can be used in applications typified by high operating pressures, high flow rates and low pressure drops, offering the same guarantees as components of conventional design.

Flowfit couplings are manufactured to the new ISO 16028 standard. This guarantees: Interchangeability with other couplings responding to the new standard, Maximum operating pressure 350 bar for all sizes, dependable operation of the coupling and low pressure drops are guaranteed, irrespective of the flow direction, male to female or female to male.

Flowfit Hydraulic Flat Face Quick Release Couplings Interchange with:

- Parker FE
- Safeway S56
- Faster 2FFI
- Aeroquip FD 89
- Snap Tite 74
- DNP PLT4
- Tomco FE
- Stucchi FIRG

Please refer to the specification table below to ensure the correct size is selected. Red plastic caps for female/male couplings up to 1”BSP available to protect and stop dirt entering the quick releases and your hydraulic circuit.

INSTRUCTIONS FOR USE

Prior to connecting ensure that the mating surfaces of the couplings are clean and free of dirt to avoid contamination of the hydraulic system.

To connect, push both couplings together until the locking mechanism engages.

For added security and to prevent accidental disconnection, rotate the collar on the female coupling a quarter turn.

To disconnect, rotate the collar on the female coupling until the notch aligns with protruding ball bearing then pull the collar back, allowing the couplings to disengage.

CAUTION

Under no circumstances should the couplings be connected or disconnected with pressure in the hydraulic system.

Whilst in use, the couplings may become hot (up to +100°C). Protective gloves should be worn when disconnecting.

To reduce the risk of contamination, the use of protective caps on the couplings when they are disconnected is strongly recommended (available separately).

BONDED SEALS

www.flowfitonline.com
TECH. DATA SHEET
HA01

Bonded seals are used in pressurised hydraulic systems as a seal between the faces of components.

They consist of a metal washer to which a trapezoidal elastomeric ring is bonded and are designed to work in hydraulic systems where the metal ring ensures that bursting forces applied to the ring are resisted.

These seals come in sizes from 1/8" BSP to 2" BSP in quantities from 10 to 100 off.

- Self Centering
- Nitrile Inserts
- Mild Steel Cadmium

FT292 PUSH-BUTTON GAUGE ISOLATOR VALVES

www.flowfitonline.com
TECH. DATA SHEET
PG011

The new FT 292 push-button isolator valves are used to protect pressure-gauges, since they have the double function of dampening the pressure surge during opening and of isolating the pressure-gauge entirely.

A reading is obtained by depressing the button.

Releasing the button shuts off the flow to the gauge with residual pressure being automatically drained.

The button can be locked to give a continuous reading. The maximum release pressure is 50 Kg/sq cm. Panel mounting facility.

Panel mounting fixtures are supplied only if expressly requested, indicate whether KM or hexagonal. Complete with connector FT 299, they allow for full location orientation for ease of reading. They may be used for working pressures up to 400 bar.

FT299 PRESSURE GAUGE SWIVEL ADAPTORS - 400 BAR RATED

www.flowfitonline.com
TECH. DATA SHEET
PG012

Adaptors FT 299 allow the connection of a pressure gauge direct to the system. They provide for correct dial orientation. The adaptor has a built in 'O-ring' seal for use with pressure gauges with sealing nipple to DIN 16288.

The oil flow is restricted to the gauge dampen any pressure shock surges.

A gasket, supplied as current product and inserted in the rotating nut, impedes any blow-by between fitting and pressure gauge.
