1.0 to 4.0 litre capacity. One coat primer as standard. Special paints available.

## Gas Valve Assembly

Valve body fitted with valve core and sealing cap.

## Bladder

Open ended, one piece in nitrile rubber, bonded to a steel ring band having a steel button to prevent extrusion through fluid port on nitrogen precharge.

## Fluid Port

Welded to shell, BSP connection

## Safety

All gas-loaded accumulators are gas pressurised vessels and it is recommended that safety consideration be given to the application in which they are used. A relief valve should always be fitted to the hydraulic system with the option of a burst disc to protect the accumulator. If there is a fire risk in the vicinity of the accumulator, then a fusible/ eutectic plug should be fitted.
